

Subject: Declaration of conformity pursuant to Regulation (UE) n. 2019/1021 (POP's)

Dear Customer,

Motor Power Company Srl, as a manufacturer and supplier of articles in the form of complex objects, declares the following:

the products and items supplied by our company comply with Regulation (EU) 2019/1021 (POP).

In particular:

- Based on our knowledge and the declarations collected from our sub-suppliers, all our products are compliant with the Regulation (EU) 2019/1021; no substances among those included in Annex I of the mentioned regulation and subsequent amendments and additions are present in the articles produced and marketed by us.

- Furthermore we are committed to reduce the use of PFAS (perfluoroalkyl substances) in our products and we work with our suppliers to ensure regulatory compliance.

To date, our products do not intentionally contain PFAS; however, since we do not test our products for the absence of these substances, the possibility of traces of PFAS in some components, resulting from manufacturing processes, impurities in raw materials, or inadvertent contamination, cannot be theoretically excluded. If this were to occur, PFAS levels would still be below the legal limits and the thresholds of concern established by current regulations, which set a PFAS concentration limit of <1,000 ppm for restricted substances.

- The company maintains a continuous exchange of information with all sub-suppliers, to verify their position and compliance with the regulation.

Motor Power Company Srl constantly monitors regulatory updates and guarantees to promptly provide the requested information if the composition of the products or current legislation changes.

We are available for any further information.

Motor Power Company S.r.l.
